HISTORY

Founded by graduates from Columbia and Princeton Universities, and with a team of international and local experts, Alisios Corporation is a bespoke boutique consulting firm specialised in tailored services to manage weather, climate, and socio-economic risks.

Alisios Corporation provides tailored services to our clients through an end-to-end co-development process with them.

We use advanced monitoring and prediction technologies to assess and identify risks and their impacts on societies, communities, and businesses, offering bespoke solutions to mitigate or transfer these risks.

Our proprietary prediction technology, Sibila[®], combines observational datasets with sophisticated, proprietary machine learning algorithms to provide tailored, accurate, and actionable insights for decision-making. We view each project as a continuum influenced by past and present events, delivering robust analytical information through continuous monitoring and prediction services.

At Alisios, we have a highly qualified, multidisciplinary team of experts:

1. Core Staff: They form the backbone of Alisios Corporation. Our central team manages and ensures the quality of all our services.

2. Lead Global Consultants: Comprising alumni from Columbia and Princeton Universities with more than 20 years of experience in climate science and climate services.

3. Local Expert Consultants: A network of local consultants that allows us to offer region-specific solutions, integrating local knowledge with advanced tools.

This multidisciplinary team enables us to deliver tailored, quality-assured services.
