your profits and well-being

SIBILA ROOMS

Alisios Corporation

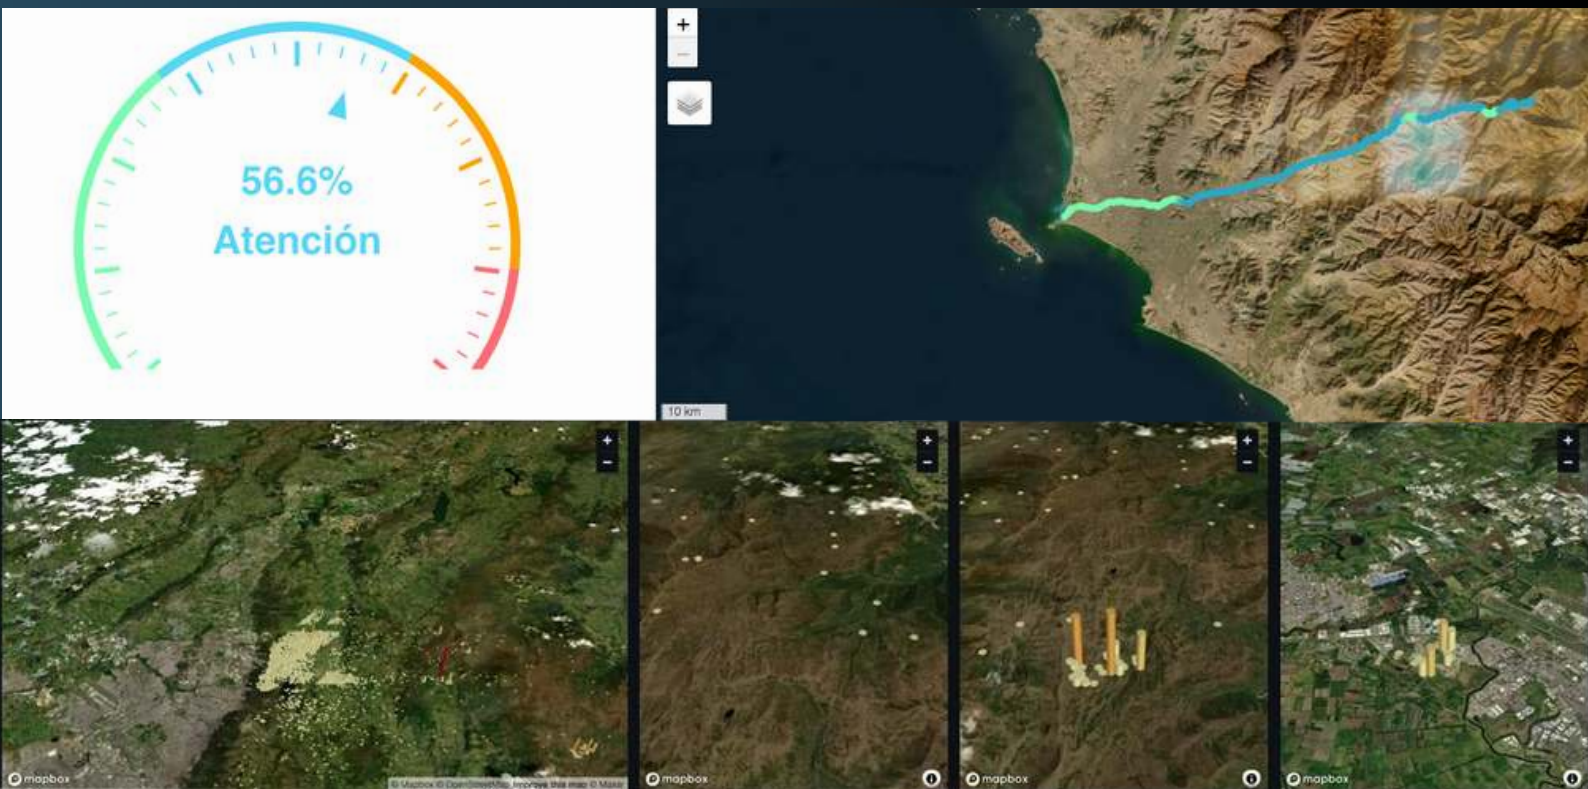

Past experiences and current circumstances shape our clients' needs and are linked to the futures they can achieve. At Alisios Corporation, our commitment is to provide high-quality services that help you plan and build the future you desire

SIBILA ROOM (™)

In a world saturated with information, the power to act depends on how you interpret it

Sibila Room gives you that power

Decide which monitoring and forecasting services you want to see, how and when. On your computer, tablet or phone. Generate maps, graphical and text reports instantly, and share them with whomever you want.

In ancient times, people had to find the sibyl's chamber in a cave to know the future. Today we bring it to the palm of your hand

HOW DOES SIBILA WORK?

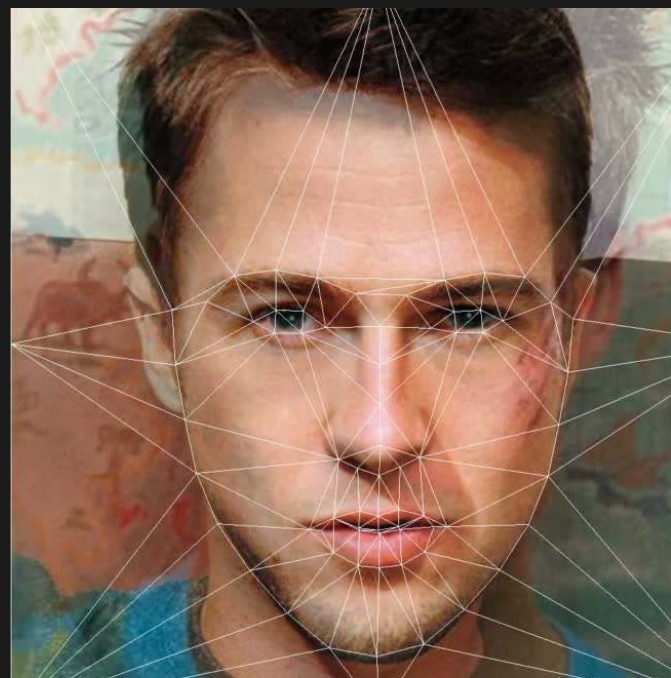

Sibila is the flexible monitoring & prediction technology developed by Alisios Corporation, based on modern pattern recognition algorithms and Machine Learning, designed to solve real problems for decision makers

Given a set of data, Sibila finds and links spatial and temporal patterns to produce reliable predictions.

Her job is like finding a noisy image and extracting the real underlying signal (the face of the Delphic Sibyl, in this case).

Similar to the facial pattern recognition used in phones today, Sibila identifies a variety of “corrections” (calibrations) that can be carried out to “transform” a face into an older or younger version of the same person: a set of dynamical, pattern-based prediction systems

WHY SIBILA?

The Sibyls were oracular prophetesses of the ancient world. According to Greek and Roman mythology, Sibyls were women to whom the gods had granted the gift of prophecy, which allowed them to foresee the future and predict key events

The Sibyls were known for announcing transcendental events to happen and to be those with knowledge in “the science of God”, offering reliable and accurate revelations

Political and military leaders turned to them in times of crisis to make important decisions and to plan successful strategies

Hence, our monitoring and prediction systems, **Sibila®**, bears their legacy by contextualising past and present, predicting and analysing the future, and serving as your trusted decision support system
