HISTORY

Founded by graduates of Columbia and Princeton Universities, Alisios Corporation was established with the goal of integrating science, technology, and local knowledge to manage climate, meteorological, and socioeconomic risks.

As an established international consortium, Alisios brings together three complementary entities that work in coordination to strengthen resilience, adaptation, and climate action on a global scale

STRUCTURE

Alisios Corporation is an international consortium comprising three complementary entities dedicated to strengthening climate action and resilience in various regions around the world.

GRAIS

「
GRAIS
」

A consulting and technical analysis unit specializing in climate projections, risk management, and resilient planning.

CMIC INTERNATIONAL

Regional headquarters for Latin America and the Caribbean, based in Ecuador. Coordinates operations, projects, and strategic partnerships in the region.

AERTHYDRAL COLLECTIVE

A nonprofit organization (NPO) within the consortium, focused on international cooperation and collaboration with development agencies.

WHAT DO WE DO?

At Alisios Corporation, we develop comprehensive solutions to anticipate, manage, and transform climate, energy, and socioeconomic risks.

We work alongside public, private, and community institutions through a co-development process that combines science, technology, and social innovation.

We offer services in climate analysis, risk management, capacity building, and sustainable planning, supported by our patented Sibila® technology, which integrates observations, models, and machine learning to generate accurate and actionable information.

Vision

To help society address the risks posed by a constantly changing climate by promoting more sustainable businesses and a prosperous future for people, communities, and the planet.

Mission

To provide customized technology services to manage the meteorological, climatic, and socioeconomic risks facing our society.

SERVICES

CLIMATE SERVICES

- Weather and Intra-seasonal Forecasting
- Seasonal Forecasting
- Interannual Forecasting
- Storm Tracking and Forecasting
- Forensic Meteorology
- Climate Projections (Climate Change and Natural Variability)

ENERGY SERVICES

- Integrating Climate Projections into Energy Planning
- Climate Risk Analysis for Energy Infrastructure
- Long-Term Energy Planning (LTEP)

- Real-time weather monitoring and alerts.
- Atmospheric analysis for aviation operations.
- Early detection of critical weather phenomena (storms, gusts, fog, wind shear)
- Weather support for airport opening, expansion, or modernization projects

HEALTH SERVICES

- Environmental Suitability
- Disease Forecasting
- Malnutrition Forecasting

AGRICULTURAL SERVICES

- Frost Forecast
- Frost Control
- Yield Forecast
- Price Forecasts
- Agricultural Input Price Forecasts

RISK MANAGEMENT SERVICES

- Landslide Monitoring and Forecasting
- Oil Spill Forecasting
- Biodiversity Impact Projections
- Parametric Insurance
- Forecast-Based Financing and Action (FBF and FBA)
- Risk and Vulnerability Assessments

At Alisios, we have a multidisciplinary team of highly qualified experts:

1. Core Staff: They are the backbone of Alisios. Our core team manages and ensures the quality of all our services and our smooth internal operations.

2. Lead Global Consultants: Composed of alumni from Columbia and Princeton Universities with more than 20 years of experience in climate science and climate services.

3. Local Expert Consultants: A network of local consultants that allows us to offer region-specific solutions by integrating local knowledge with advanced tools.

This multidisciplinary team enables us to offer customized services with guaranteed quality.

Alisios
Corporation
